

Nijat Yusubov

DevOps Engineer

+994552224328 | nicat.yusubov@gmail.com | [Linkedin](#) | [GitHub](#)

SUMMARY: DevOps & Platform Engineer with nearly 5 years of experience specializing in Kubernetes, IaC, and CI/CD for production environments in FinTech, AI, and government sectors. Proven ability to build systems from scratch, cutting release efforts by 80% and reducing infrastructure costs by 42% at an AI startup. Expert in automating AWS and on-prem infrastructure with Terraform and Ansible to accelerate deployment cycles and improve system reliability.

SKILLS: DevOps | AWS | Kubernetes | Docker | CI/CD | Terraform | Linux | Git | Ansible | Python | GitLab | Bash | Shell Scripting | Helm | Prometheus | Grafana | GitHub Actions | IaC | Observability | Nginx | Apache | ELK | ArgoCD | MySQL | PostgreSQL | HashiCorp Vault | Redis | GitOps | SRE | HAProxy | SAST | VMware | IAM | RBAC | Powershell | Disaster Recovery | Cloud Infrastructure | Infrastructure Automation | Cloudflare | Claude.

PROFESSIONAL EXPERIENCE

Innovation and Digital Development Agency (December 2021 - now)

Full-time · Baku, Azerbaijan

IDDA's initiatives in digital government, digital skills, and innovation ecosystems

DevOps Engineer

- Supported the Opendata.az portal, provisioning MinIO storage, SolarisDB and resolving critical NFS storage and container images issues to ensure data availability for 23 organizations and 792 datasets.
- Architected and deployed a high-availability infrastructure for a legacy government website, achieving 99.96% uptime and meeting strict SLA requirements.
- Engineered a self-hosted Vault alternative (OpenBao) from the ground up, creating a standardized secrets management solution for 5 critical projects across dev, stage, prod, and DR environments, standardizing secrets management across 4 environments, configured policies and accesses.
- Implemented and configured OpenMetadata with Docker Compose for a 6-person data analytics team, enabling centralized metadata discovery and faster dataset search. Configured LDAP integration for OpenMetadata to enforce centralized authentication and role-based access control, aligning with corporate security policy for 350 users.
- Engineered a monitoring system from scratch using Nagios, implementing custom checks and performance optimizations to ensure proactive infrastructure observability.
- Deployed and maintained a production-grade Kubernetes cluster from scratch; authored Helm charts for service packaging and provided ongoing k8s cluster and workload support.
- Built a centralized logging pipeline from scratch using the ELK Stack and Fleet, enabling real-time log ingestion and visibility across production environments.

Hubpoint.ai (November 2025 – June 2026)

Remote · Part-time Contract · Berlin, Germany

Booking and business management platform with AI integration

Senior DevOps Engineer

- Built GitHub Actions pipelines from scratch, replacing manual code uploads and automating deployments for the development team, cutting release effort by 81.5%.
- Resolved GitHub Actions artifact retention issues by reducing storage from 90 days to 3, keeping usage within the monthly 500 MB free-tier limit.
- Reduced the Docker images build process time from 11.7 minutes to 3.2 minutes, and Docker image size by 74.5% (6.1GB to 1.53GB).
- Established an observability stack from the ground up Prometheus, Grafana, and Loki; configured infrastructure dashboards and alerting rules, reducing mean time to detect incidents significantly, reducing MTTD from hours to <5 minutes and maintaining 99.5% uptime.
- Provisioned 10 AWS VMs across 2 environments (dev, prod) using Terraform; authored Ansible roles that automated configuration management and cut environment setup time from hours to under 13 minutes.

- Cut AWS infrastructure costs by 42% through 1-year reserved instance commitments and instance right-sizing, aligning spend with actual workload requirements across dev and prod environments.
- Designed and provisioned an EKS cluster via Terraform as part of an upcoming migration initiative; conducted functional testing across workloads covering 9 services planned for cutover.

EDUCATION

Azerbaijan State Oil and Industry University (September 2009 - September 2013)
Bachelor's Degree in Mechatronics and Robotics Engineering

Baku, Azerbaijan

COURSEWORK & TRAINING

Linux Redhat Certified System Administrator (RHCSA – EX200) (Udemy course)
Kubernetes - Complete Kubernetes Course (Udemy course)
Kubernetes: GitOps with ArgoCD (Linkedin course)
AWS Certified Cloud Practitioner (CLF-C02) Cert Prep (Linkedin course)

LANGUAGES: Russian (C2), English (B2)
